

## **THEIR FAVOURITE THINGS**

(The ultimate EISMINT song by Mia, Karen, Bruce and the Eismint family singers.)

Dorthe explains differential equations.  
Shear stress and strain rates and inverse relations.  
Ice crystal Lego to us she did bring.  
These are a few of her favourite things.

Georg he took us in search of a glacier.  
Blisters and sunburn, torn muscles and grazes.  
Back aches and head aches with altitude spins  
these are a few of his favorite things.

Turbulent fluxes and surface albedos  
Just tune the constants for each term you don't know.  
Pragmatic approaches to glacier winds.  
These are a few of Hans Oerlemans things.

**Instabilities in numeric schemes  
make you feel so mad.  
You simply remember their favourite things  
and then you don't feel so bad.**

Coherent functions and baseline correction.  
When there's no fit it's called data selection.  
Helmut he rides on the road as a king.  
This is just one of his favorite things.

Coffee and croissants and red wine with pasta,  
pasta and pasta and pasta and pasta.  
Sauna and spas that flow fresh from the spring.  
These are a few of our favourite things.

**When the day's done and your head's numb  
from the talks you had.  
We simply remember our favourite things  
and then we don't feel so bad**

Drainage transitions and glacial surges.  
After a few years a dead cat emerges.  
When Andrew gets drunk he's so happy he sings.  
He sure likes a glass of his favorite thing.

Viscoelastic deflections are thrilling.  
Kurt treats the lithosphere rebound with feeling.

But now he has found what will make his heart sing:  
Atlantis is really his favourite thing.

**To the EISMINT'S special dream team  
we would like to add  
it's all been so perfect but soon we'll be leaving.  
And then we'll all feel so sad.**
